

Circuit Pad planning Sheet

For planning layouts using:

MePads from QRPM.com/GGRP Club
A Dremel with small grinding tool

A Bench drill with X/Y vice
A fancy CNC Machine

Example Pads

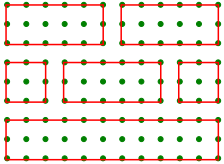

The dots are 2.54mm apart.
The same pitch as many components such as IC.s
Here you can see how you would construct
...an 8 pin D.I.L. pad.

(Leave a 2.54mm gap for the cut in the copper)

A good size pad is 5.08mm x 5.08mm

Note: For our USA friends, 2.54mm equals 0.1 inches

Mix and match pad sizes to suit your circuit
